

Business Sales Performance Analytics Report

This report presents a comprehensive analysis of the Global Superstore sales dataset using Power BI. The dashboard was developed to identify revenue trends, regional sales performance, customer segment contribution, and product-level insights to support data-driven business decisions.

Project Objectives

Objective
Analyze sales and profit performance
Identify top-performing products and regions
Track quarterly and yearly sales trends
Measure business profitability using KPIs
Generate actionable business insights

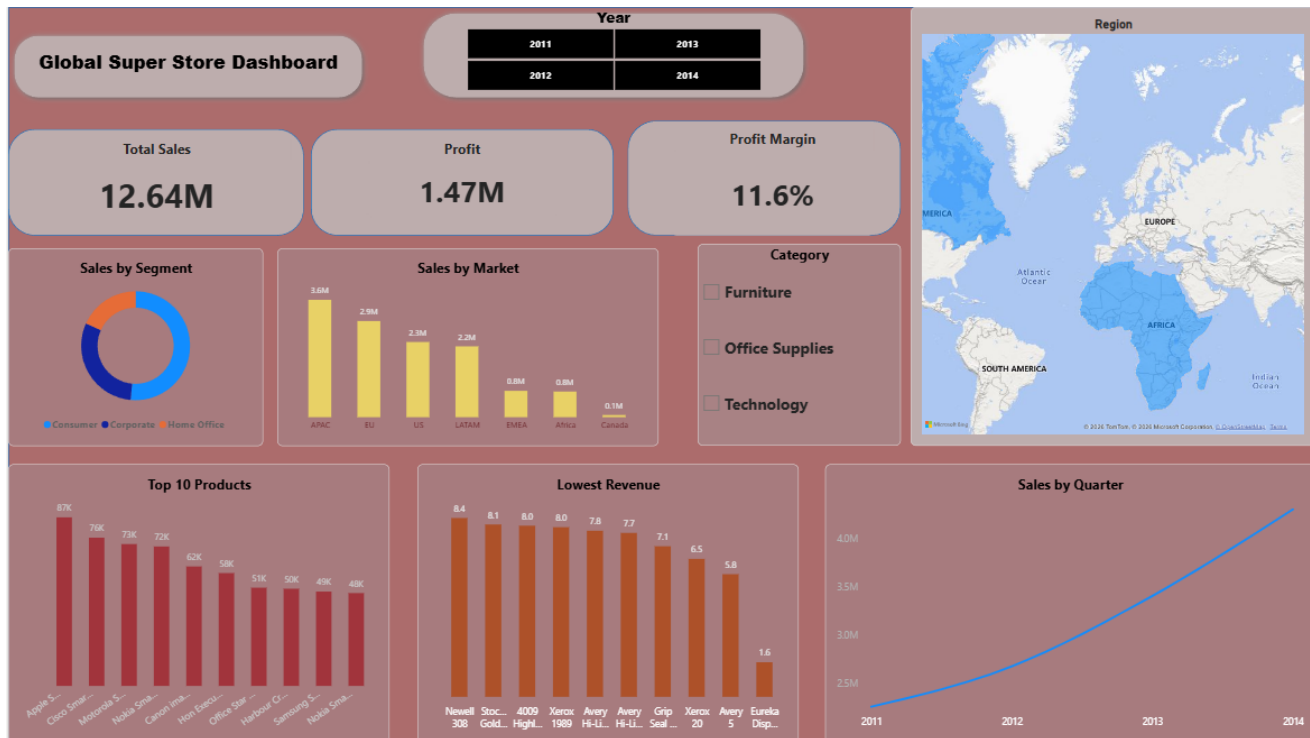

Dataset Information

Dataset Used: Global Superstore Dataset
Tools Used: Power BI, Excel
Key Fields: Sales, Profit, Market, Category, Segment, Product Name, Order Date, Region

Key Performance Indicators (KPIs)

KPI	Value
Total Sales	12.64M
Total Profit	1.47M
Profit Margin	11.6%

Dashboard Overview

Business Insights

- APAC market generated the highest sales revenue.
- Consumer segment contributed the majority of total sales.
- Quarterly sales showed consistent growth from Q1 to Q4.
- Technology category demonstrated strong profitability.
- Some products generated consistently lower revenue and require business review.

Recommendations

- Focus marketing efforts on high-performing regions like APAC.
- Improve inventory planning for top-selling products.
- Reduce investment in consistently low-performing products.
- Enhance promotional strategies during lower-performing quarters.
- Continue monitoring profitability across categories and segments.

Conclusion

The Business Sales Performance Analytics dashboard successfully provides meaningful insights into sales performance, profitability, and regional business trends. The project demonstrates practical skills in data visualization, KPI analysis, dashboard design, and business intelligence using Power BI.
